RESUME

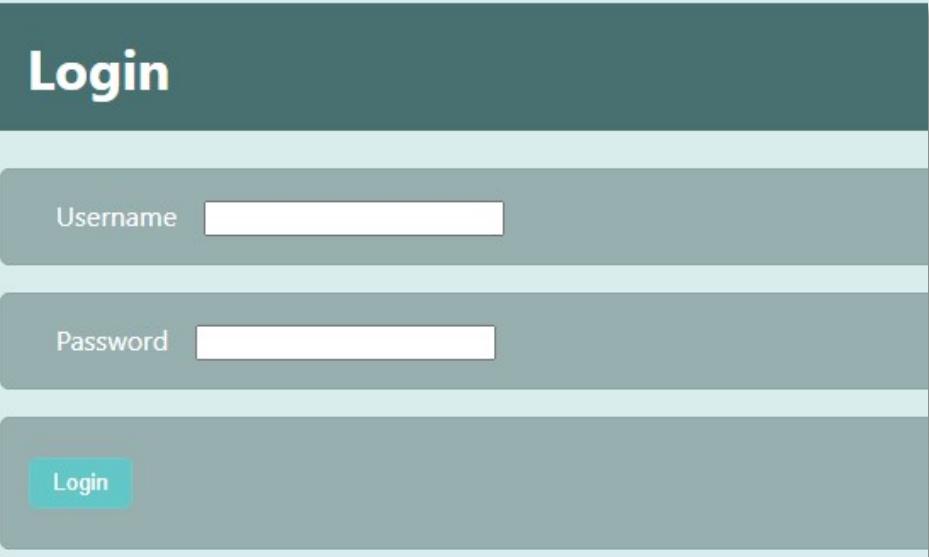

<header> Hello world </header>

I'm Mahdi Toussi  
Aspiring Full-stack developer

My ultimate goal is to create websites that are fast,  
responsive and look professional !

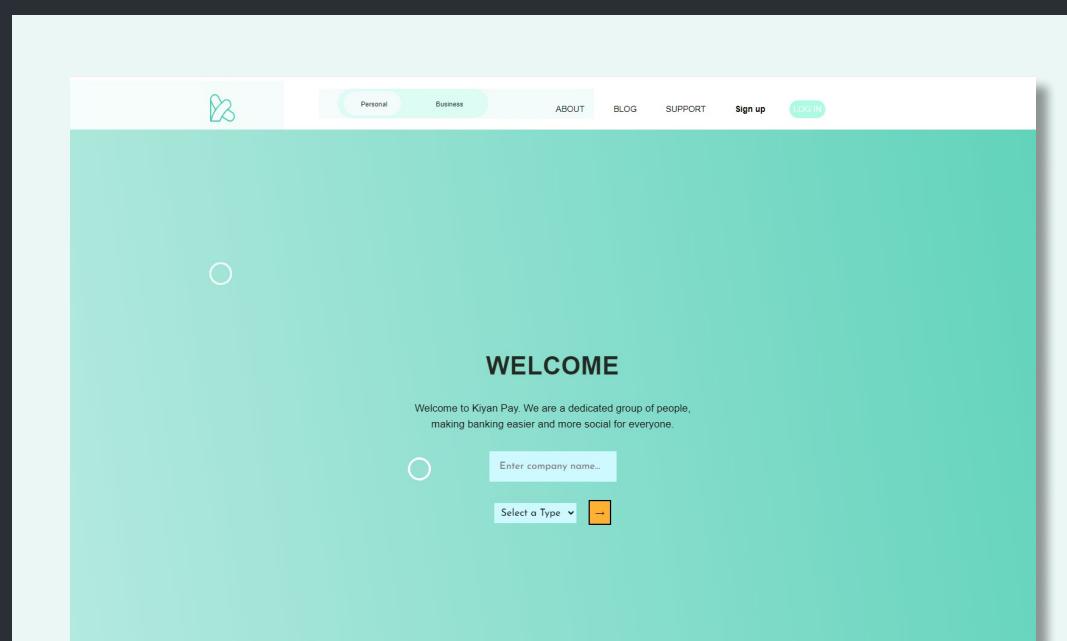

# PROJECTS

## Exam system

This exam system was designed and created with a group, with each member completing a certain group, my job was to work on one of the 3 main groups - the trainee. This system was awarded and picked as one of the top 5 best projects by the uni.

## KiyanPay website

This website was created during my month-long internship at KiyanPay (now known as kixy).

The goal of the website was to make companies using the website feel a more personalised experience.

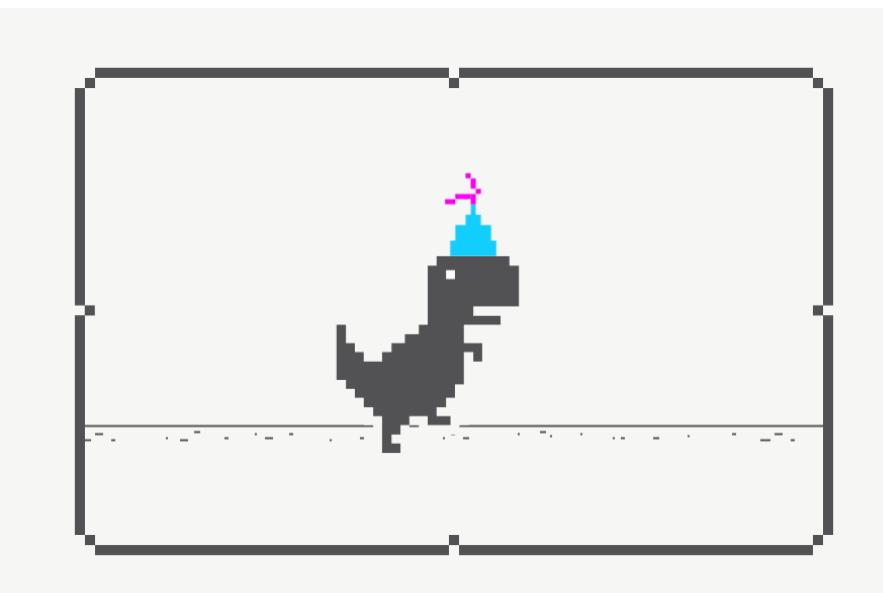

[CHECK IT OUT](#)

## Weather Application

This application is designed for cyclists. The main goal of the app was to give you all the information needed quickly about the weather, as a cyclist would require quick information when cycling.

## Tamadotchi Dinosaurs

Each dinosaur could be personalised allowing the user to feel a bond akin to a Tamagotchi. This game was developed using object orientated principles in Java.

## Path finding algorithm

During my internship in BrightNetwork I created a path finding algorithm, that goes from point A to point B, while avoiding and going round any obstacles

## Blogging website

The goal of this website was to create a personal CV/blogging page, that allowed the owner of the website to create and remove blogs, and allow others to see the blogs posted.
